#### The Hanson Group Offers Two New Products

ATLANTA, GA [August 11, 2003] In cooperation with Aceto Corporation, The Hanson Group LLC has secured a new distribution channel in order to deliver both Propylene Carbonate and TEDA (TEDA 33LV) at a lower cost.

Propylene Carbonate, a viscosity reducer in polyureas and TEDA, a balanced catalyst used to promote both the blowing and gelling reactions in the production of polyurethane foams are both used throughout the Polyurea and Polyurethane industry.

“One of the strongest resources that The Hanson Group LLC delivers is comprehensive and timely access to single source or hard-to-source products, said Lee Hanson, President of the Hanson Group LLC. We have negotiated with many organizations licensing agreements that allow us to offer a full-range of products that are usually difficult to find. Furthermore, these agreements have given us the opportunity to open new channels of product distribution to offer consumers economically priced material.”

“We are not just here to sell the product and be done”, said Don Lowe a member of the Hanson Group Sales team. “We want to be a resource to our customers to provide technology, technical service, application assistance, production location, logistics and financing for not only TEDA and Propylene Carbonate, but for all the unique products that The Hanson Group keeps in inventory.”

Please call The Hanson Group LLC to discuss any particular specialty chemical needs that you have. The Sales and Technical specialists will work together to meet your product requirements.

The Hanson Group, LLC handles a solid product line of specialty chemicals for the Polyurea and Polyurethane markets. Products include:

- BASF Polyetheramines: D2000, T5000, D230, D400 and T403.
- BASF Catalysts: DMDEE, DMCHA, etc...
- Albemarle Ethacures 100, 100LC & 300 (in the Southeast only)
- Aceto Corporation Propylene Carbonate and TEDA Catalysts
- UV Stabilizers
- And many more specialty chemicals (see at [www.hansonco.net](http://www.hansonco.net))
